GENERAL:

Pressure Vacuum Gauges (PVG) are used to measure the relative pressure inside the expansion vessels of transformers. These PVGs come in various mounting options and measure both negative and positive relative pressure.

APPLICATION:

Gauges are made with stainless steel case with a variety of dial and mounting sizes. They can be used with all kinds of transformers and other related devices. With option available for high corrosive environments as well. Viat gauges are pre-calibrated and can be used at any altitude. The gauge can be adjusted for the relative atmospheric pressure if required.
